

***Addendum
2015 Special Edition***

***Special Edition
350M HP
Haute Puissance***

Ultimate Reference Amplifier

Custom Made for: client, country

Congratulations on the purchase of your 2015 Special Edition 350M HP Ultimate Reference Amplifier.

French for High Power, Haute Puissance (HP) is a special edition 350M that is carefully crafted for increased dynamic headroom and increased clamping ability of a loudspeaker. This added control provides for an even more explosive sonic experience - without sacrifice in any way!

Discerning audiophiles know the flagship Tenor 350M mono block amplifier as “sans égal” or “without equal”. The 2015 Special Edition model Haute Puissance extends per channel output power from the reference 350 Watts to an amazing 500 Watts @ 8Ω. Combined with a two times damping factor and a slightly lower noise floor, the “push”/“pull” control of any loudspeaker becomes even more effortless and accurate for a true rendering of any recording.

A newly designed transformer boasts a proprietary secondary stage that supports a greater reserve for output through optimized power regulation and advanced current sharing of the mosfet power output modules.

Tube compliment (per chassis):

6 X NOS 7119/E182CC

1 X ECC99

2 X 12AX7

The 350M HP visual is further heightened over the classic Tenor cherry wood and metal finish with the addition of internal micro LEDs to showcase the inner beauty of the amplifier's internal electronics with a soft blue glow! Your visual experience is further enhanced by the blue luminescence of the transformer's Starfire glass lens sitting proud above the amplifier top plate.

All of this contributes to the immense beauty of your new Tenor Special Edition 350M HP Haute Puissance!

*Available only by special order through select Tenor Dealers/
Distributors worldwide.*

This document is provided as an addendum to the standard 350M manual (where greater details are available). All functions of the 350M HP Haute Puissance are identical to the 350M - with the following exceptions:

- 1. The 350M HP Haute Puissance has been built with a new custom transformer, optimized power regulation and current sharing - to provide over 500 Watts @ 8Ω, 900 Watts @ 4Ω & 1500 Watts @ 2Ω*
- 2. Special reserve high gain 7119/E182cc nos tubes (a rare and expensive variant of the outstanding 7044 nos tube) & 12AX7/ECC83 Mullard tubes contribute to the Haute Puissance explosive performance.*
- 3. Micro LEDs bathe the inner workings of each chassis to allow the internal beauty of each Haute Puissance to shine through. An on/off switch for these lights is located on the bottom-front of the amplifier just to the left of the “mute” button as can be seen in the picture below:*

- 4. The main fuse in 2XX voltage systems has been increased to 10 Amps to accommodate greater startup surges. The main fuse for 1XX voltages at 15 amps is unchanged.*
- 5. Many believe the Starfire Crystal on top of the transformer has mystical properties that collaborate with the 350M HP Haute Puissance in the reproduction of sound. Of course, you can judge for yourself but everyone agrees it sure looks great!*

Installing the Starfire Crystal takes some special care as can be seen from the following pictures. Please use the white gloves provided to remove the Starfire Crystal from its packaging and to install it safely atop the transformer and to avoid fingerprints on the underside of the glass.

- A. With white gloves (provided) on, carefully remove Starfire Crystal from packaging and insert in top cutout as shown:

- B. Carefully lower Starfire Crystal by transferring grip slowly and surely to sides of Crystal as shown below:

- C. Once Starfire Crystal is set in position carefully rotate until the logo is aligned with the amplifier top and the Crystal has equal space all around it:

- D. You are now ready to power up the finest amplifier in the universe. Please refer to the standard 350M manual to familiarize yourself with the operations and features of its use:
